

In The Abstract

Please amend the abstract as follows:

A ball valve particularly suitable for fuel aggregates comprises an outlet channel ~~(12,14)~~ and at least one inlet channel ~~(16)~~. Between the outlet channel ~~(12,14)~~ and the inlet channel ~~(16)~~, a switching element ~~(20)~~ is provided. A sealing element ~~(24,26)~~ contacts the switching element ~~(20)~~. In order to increase the sealing effect, the sealing element ~~(24,26)~~ comprises two sealing lips ~~(28,30)~~ each of which contacts the switching element ~~(20)~~ on a circular line.
